

## ***Why Recycle?***

### **BECAUSE IT MAKES DOLLARS AND CENTS**

*Recycling creates many new jobs and preserves natural resources. Also it takes 10 to 20 times less energy to make new products from recycled rather than raw materials.*

### **BECAUSE IT MAKES SENSE**

*Half of what we throw out every week is recyclable. Putting it in the garbage is wasteful, costly, and pollutes the environment.*

### ***Recycle into what?***

*Thousands of everyday products are made from recycled materials.*

**Paper can be turned** into a telephone book, egg cartons and even newspaper.

**Cardboard** is reconverted into cardboard and can also be transformed into facial tissue and paper towels.

**Metal** reverts back to... metal such as tin cans, aluminum plates and foil.

**Glass** into... glass such as jars, bottles, but also mineral wool.

**Plastic** takes on a new life as recycling bins, flower pots, carpets and park benches

**TOGETHER, LET'S TAKE AN ADDITIONAL STEP TOWARD A QUALITY ENVIRONMENT**
